LogiMAT 2024: Smart Logistics Platform with ChatGPT Integration

The ICS Group (ICS for short) is presenting pioneering software solutions for automating intralogistics in SAP® and non-SAP environments at this year's LogiMAT in Stuttgart from March 19th to 21st, in Hall 8 / Stand A21. The company wants to set a new milestone with the further development of its warehouse management system (WMS) Stradivari® into a smart, AI-based logistics platform.

Kelsterbach, January 12, 2024: The major challenges in the logistics industry, such as significant cost increases due to ongoing crises, the ongoing labor shortage or supply chain bottlenecks, require innovative automation solutions for resilient logistics. The Stradivari logistics platform from ICS offers exactly that. As a multi-warehouse and multi-client WMS, it seamlessly networks all warehouse processes and integrates data capture, identification and provision systems as required. What also particularly distinguishes Stradivari is the constant further development and flexibility for holistic digitalized intralogistics, with which logistics companies gain speed and competitiveness in dynamic market events.

As a top innovation, ICS is presenting the integration of the advanced AI chatbot ChatGPT in Stradivari to the specialist audience for the first time at LogiMAT 2024. For example, ChatGPT answers inquiries - formulated in natural language - about delivery status and product availability, filters for top sellers and creates individual inventory reports. Employees are also supported in process operation through interactive chat dialogs. With the Predictive Logistics module, forecasts for inventory management and resource utilization can be made and logistics processes can thus be made more efficient. The AI-based computer vision technology, which analyzes and maps goods movements and inventories in the warehouse in real time - without manual scanning processes - is also a current Stradivari highlight.

The transport control system also ensures efficient internal transport, optionally including real-time localization of transport means and units. Thanks to the

VDA5050 interface, fully automated transport processes via autonomous industrial trucks (AGV, AMR) across manufacturers are possible.

These and other Stradivari modules, together with the Pay per Use billing model, enable companies to realize a high level of automation at usage-based operating costs. The warehouse of the future not only operates digitally and transparently, but also intelligently and proactively. Visitors to the LogiMAT stand can see for themselves live showcases of the smart logistics platform Stradivari in combination with the latest auto-ID technologies, such as barcode scanners, mobile computers and wearables.

Two innovative partners, Cambium Networks and LogSolution, are also represented at the ICS trade fair stand. Cambium Networks is a leading provider of future-proof WIFI and directional radio solutions that are essential for mobile online processes in intralogistics. LogSolution offers, among other things, intelligent forecast software for the management of logistics processes, which will be presented on site in a common use case. "Together with our partners, we provide comprehensive insights into the latest developments and solutions for intralogistics," says José da Silva, Chief Sales Officer of ICS, in anticipation of LogiMAT 2024. Interested parties can register at www.ics-group.eu. Register immediately to visit the stand and secure a day ticket for the trade fair.

About ICS Group

The ICS Group (ICS) supports companies with digital transformation in the supply chain – end-to-end. Through individual consulting, innovative IoT technologies, integrative platforms & software as well as tailor-made IT service management, customers receive sustainable solutions for their growth.

For example, ICS dynamizes production with real-time analytics and Industry 4.0 processes, automates warehouse logistics with WMS and SAP® solutions, accelerates transportation with mobile real-time data and visualizes the POS with digital assistants.

ICS sees itself as a full-service partner and reliably manages mixed IT architectures. Users receive individually tailored infrastructure solutions, from the product to IT and logistics outsourcing.

The solution integrator, headquartered in the Frankfurt/Rhine-Main metropolitan region, has over 30 years of international project expertise and currently employs around 300 people.
