

## PRESS RELEASE

# Smart Solutions for the automated Warehouse and the Digital Supply Chain

**LogiMAT 2020: The ICS Group shows companies how to future-proof and optimize their individual processes in logistics and omnichannel while keeping costs to a minimum.**

**Neu-Anspach, December 9, 2019:** The ICS Group (ICS) will be presenting the new developments in their portfolio on the automation and digitization of warehouse, logistics, and general supply chain processes at Booth A21 in Hall 8 of the LogiMAT trade fair in Stuttgart from March 10-12, 2020. ICS specializes in integrative software, systems, and smart services that customers use to attain significant advantages in productivity and economies of scale over short periods of time. The Warehouse Management System Stradivari® WMS is the central focus of the software segment. Its tried-and-tested features for specific industries guarantee it a fast rollout, and the 2020 version is prepared for various Android devices such as wearable computers, handhelds, and tablets. ICS will also be presenting enhanced and intuitive software interfaces for the pre-configured mobile business platform “4mobile” in transport and store logistics, and for the merchandise management app “ICS StoreManager” in retail and warehouse environments.

In addition, innovative solutions for real-time localization and track-and-trace, and for mobile device management, will be on display. ICS will also be offering advice on device migration from older versions of Windows to the future-proof Android operating system. The stand offering is rounded out by the current top technologies in mobile computing, scanning, and on-demand printing, which will be available to try out in a live test for individual requirements.

Stuttgart, March 10th-12th  
**Hall 8 / Booth A21**

In logistics, the factors critical to success are speed, process safety, and real-time transparency. Stradivari WMS, the system capable of managing multiple warehouses and multiple clients, has been proving its strengths in these areas for over 20 years in mid-sized businesses. ICS's quality-tested Warehouse Management System integrates storage and retrieval systems, robot-supported storage systems, and real-time transport control systems that all meet requirements, as well as paperless order-picking processes such as pick-by-voice, among others. Android mobility, smart IoT processes, and optional video intelligence also guarantee the highest level of scalability.

The "4mobile" software takes on the task of real-time processing in external logistics for transport operators and logistics providers, and for technical service fleets. Digital workflows and real-time localization help streamline scheduling, vehicle loading and unloading, routes, cold chain monitoring, and on-site order management. Thanks to the new software features and enhanced telematics functions, the tried-and-tested software also supports sustainable reverse logistics and helps to significantly reduce carbon dioxide emissions.

"ICS is the digitalization partner for process optimization in mid-sized companies and corporations. Personal consulting and individual concepts plus scalable software and system solutions guarantee integration with minimal costs and significant increases in productivity from the moment they go live. We also ensure cost-optimized investments and processes with high availability due to customized smart services for IT and machine operation and general supply chain collaboration, for example," explains Oliver Moser, Managing Director of the Software division and Chief Digital Officer for the ICS Group.

More information on the exhibition program can be found online at [www.ics-group.eu/logimat-2020](http://www.ics-group.eu/logimat-2020). This is also where you can register as a stand visitor and request free tickets to the trade fair.

### **About the ICS Group**

The ICS Group (ICS) assists mid-sized companies and corporations with digital transformation in the supply chain – end-to-end. With their personal consulting, innovative IoT technologies, integrative platforms and software, and custom IT service management, customers are able to find sustainable solutions for their growth and globalization.

In this way, ICS can improve production with AI, real-time analytics, and Industry 4.0 labeling and marking, automate warehouse logistics with WMS and SAP® solutions and robotics, speed up transportation with mobile real-time data, or visualize the POS with digital assistants, to name a few examples.

ICS regards itself as a full-service partner and provides reliable management for a mixture of both IT hardware and IT architecture. Users receive customized infrastructure solutions, from the product to IT and logistics outsourcing.

The ICS Group includes software development, special plant construction and label printing, a multi-lingual service desk, a certified repair center, field service throughout Europe, and more. The solutions integrator, based in the metropolitan Frankfurt/Rhine-Main area, has over 30 years of international project expertise and currently employs around 300 specialists.
