

4mobile - Platform for Mobile Processes

IT Networking and Optimization of Transport & Logistics

Mobile data in real time

4mobile integrates order management in transport and logistics across companies and bidirectionally in real time.

The user is supported by digital workflows for disposition and route optimization, for vehicle loading, delivery, shelf maintenance and order entry as well as for packaging exchange and returns management.

Printed shipping documents, manual multiple data entry and information gaps are a thing of the past.

Industry solutions, e.g. for

carriers

courier services

delivery services

WE ARE THE **SUPPLY CHAIN ARCHITECTS.**

TRANSPARENT, ECONOMICAL & SAFE PROCESSES

Proactive logistics planning, real-time track & trace and monitoring take place via a web portal. As a result, all partners in retail and freight logistics benefit from transparent, economical and secure processes for store delivery and home delivery.

Drivers use 4mobile on mobile terminals or business smartphones to manage their route and order data.

4mobile is preconfigured for Windows and Android (iOS optional) and is seamlessly integrated into existing IT systems. Thanks to the open, scalable software architecture, the mapping of the individual process is time-saving and cost-optimized.

Key Benefits

- Digitally networked, cross-company order management
- Proactive process planning and process reliability in the supply chain
- Effective controlling through fast service invoicing
- Seamless IT connection (e.g. SAP, Microsoft Dynamics NAV)
- Efficient use of resources due to demand-synchronous delivery frequency
- Optimum inventory level at any location, at any time of day
- High customer loyalty through service transparency and quality
