

## ICS TRANSPORT CONTROL SYSTEM (ICS eTLS®)

Optimization of your Internal Transports and Increase of Utilization.

### Real-time transport management

Due to the enormous amount of goods that are moved in your warehouse and on your plant premises every day, transparency about this movement of goods is more important than ever. By digitizing your transport processes, you can use all available resources efficiently, increase profitability and strengthen your competitive advantage. Our ICS Transport Control System (ICS eTLS) enables you to have a transparent overview of your transport units at all times and to carry out transport orders efficiently.

In addition, ICS eTLS enables you to map transports from service providers that take place on your plant premises. In situations like planned maintenance with machine shutdown it functions as „mobile WMS“ for temporary material containers.

The fast integration of service providers enables external users to have access to the ICS eTLS and thus allows transparent processes.

The Transport Control System of the ICS Group has a modular structure and can be implemented at your site in a very short period of time.

It offers a wide range of standard and optional features that help increase plant agility and help create a competitive advantage. Due to the pay-per-use concept, the ROI is achieved within a very short period of time.

You bundle all transports in a central solution and digitize your goods movements - cloud-based and highly scalable!

**WE ARE THE SUPPLY CHAIN ARCHITECTS.**

# DIGITALIZATION OF YOUR TRANSPORT PROCESSES

Use resources efficiently and increase profitability.

## The functions

### Optimized resource utilization

- Creation of order priorities
- Open interfaces to ERP and WMS systems
- Flexible integration of external service providers/third-party service providers
- „Mobile WMS“ for material containers in case of machine shutdown
- Control center function
- User administration incl. rights management
- Paperless bookings, e.g. via photo/GPS documentation

### Position identification

- Transport order documentation on the basis of assigned location
- Documented delivery with GPS determination and photo marking

### Mobile application

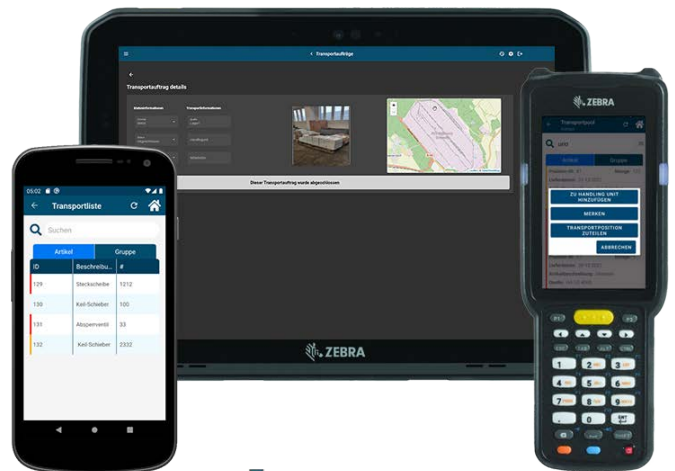

- Due to its smart and open structure, it can be used for any kind of transport from at least one source to one destination
- This can be the transport of goods within a warehouse or the transport between halls
- Handling units can be filled and controlled transparently
- The smart transport app supports and controls the entire transport process
- Fast and easy registration of new devices through cloud solution

### Easy overview of resources

- Easy overview of resources
- Analysis of journeys & evaluation for optimized processes
- Constant transparency & location of the goods

## Wide range of applications

The ICS eTLS is used on all common Android mobile computers, such as: Business tablets, smartphones, handhelds, forklift terminals and is future-proof thanks to the latest cloud solution.

## Your Key Benefits

- + Flexible costs through pay-per-use
- + Cloud-based - High scalability and security
- + Optimized resource utilization
- + Centralized data management
- + Transparent goods movement

The ICS Group is looking forward to speaking with you!
